

Service: Vantage

GLOBAL WIRELESS EXPENSE MANAGEMENT SERVICE

Designed with speed and ease of use in mind, Vantage allows you to view, compare and analyse mobile expenditure across all countries and networks using Wireless Expense Manager.

This gives you the freedom to choose the most appropriate mobile network operator or operators to suit your geographic organisation, without the disadvantage of disparate bills in different formats, languages and currencies.

KEY FEATURES

Multi-language

Vantage supports English, French, Spanish, German, Dutch, Italian, Portuguese and Swedish, with more languages to follow.

Multi-country

Vantage is capable of handling billing data from any network in any country. The only limitation is the ability of some networks to provide the data required.

Multi-currency

Financial data is capable of being stored in any currency, therefore multi-country bills can be viewed in whichever currency is most convenient.

Currency converter

A built-in currency converter allows you to enter your own currency rates and to consolidate costs into a single currency for all countries.

KEY FEATURES continued

Multi-data protection regime

Local variations in privacy protection are allowed for. For example, a user may be able to see the details of their own private calls, but their manager can only see the billing summary.

Data storage

24 months of data stored for analysis across all countries.

APPLICATIONS

Multiple networks in the same country

For organisations with more than one mobile network operator in the same country, Vanttage amalgamates the billing data and displays it as a single spend.

Multinational organisation with multiple networks

By centralising mobile expenditure and offering a single multi-language, multi-network, multi-country service you can benefit from the freedom of in-country contracts with a consolidated, single management service, irrelevant of network.

BENEFITS

- Saves management time and effort by making reporting quick and simple
- Same visibility across the organisation, across all countries and carriers, giving easily intelligible data to base decisions on
- Network Independent management system is unaffected by any changes of carrier
- 24 months of data stored for reporting, making in-depth, longitudinal analysis feasible
- Enables comparison between countries, to spot variances in expenditure and usage
- Single platform for all countries reduces the costs of implementation, training and support
